

## COUNTDown for rising diesel prices

COUNTDown from Highspeed Lubricants Ltd is a single diesel fuel treatment that decreases particulate emissions, improves fuel economy and reduces engine and component wear. The additive is used across a wide range of commercial vehicles, including transport fleets, county councils and some 'blue light' services.

It can be added to bulk fuel storage or directly to the fuel tank and acts as a cleaning agent on the finely engineered parts of the diesel system. It influences the combustion process itself, working towards a more complete and sustained burn. It raises lubricity in the diesel too, which reduces wear in the pump.

The product is safe to use in all diesel vehicles, whether standard or turbocharged, with or without catalysts. It meets all ACEA Fuel Charter Standards and does not compromise warranties. The treatment ratio for the product is 1,000 parts diesel to one part of the additive.

Bus and Coach Buyer readers can take advantage of special prices (see advert on page 47). COUNTDown is available in a three pack of one litre bottles, a COUNTDown Carrier containing 50 one-shot per fill recyclable plastic bottles or in 25 litre barrels.
