THE UK'S BEST KNOWN FUEL ADDITIVE

THE WINNING POST

WELCOME TO THE WINNING POST. THIS MONTH EVERYONE WHO ENTERS WILL GET A £5.00 VOUCHER TO SPEND!

COUNTDOWN TO BLAST OFF!

COUNTDOWN REDUCES PARTICULATES, PROTECTS PUMPS AND INJECTORS AND IMPROVES YOUR CAR'S MPG!

OVER £150's WORTH OF ONE OF THE UK'S BEST KNOW DIESEL FUEL ADDITIVE!

OVER A YEAR'S SUPPLY FOR TWO WINNERS!

It's rare that we get the chance to run a competition as diesel-tastic as this! The question of using oil and fuel additives is one that comes up very often here at *Diesel Car*. You can observe the debate within our pages, darting between readers letters and very own editor and our technical whizz kid, ..err, Dr Diesel.

So just what should you do about additives? Do you pay more for your fuel with all its added extras? Well you can, but there's something else that you can do, You can put the additives in yourself after you've bought the diesel.... And this is where COUNTDown comes in.
We're giving away two of the Countdown Carrier boxes as pictured, each of which hold 50 'one shot' bottles of a substance that reduces particulate emissions by up to 90 per cent and improves your car's fuel economy at the same time.
Each bottle is added to a full tank of diesel, and contains enough to treat 50 litres of diesel, and once added, will clean the entire fuel system – giving greater mpg and huge improvements in particulate emissions.

All you have to do to enter is to answer the following question:
"How many litres of diesel will one Countdown Carrier box treat?"

Put your answers on a postcard and send them to Countdown Competition, Diesel Car Magazine, 47 Marsh Green Rd, Marsh Barton, Exeter EX2 8PN to arrive here no later than 20th April.

The Complete Diesel Fuel Treatment

FUEL ADDITIVES

DO WE NEED THEM OR NOT?

Although people might not think that fuel additives are a useful thing, they'd be surprised to know that every main oil and petrol producer would disagree with them as they are used in most premium brands

ADDING UP ADDITIVES

Diesel fuel additives are used for a wide variety of purposes, however they can be grouped into four major categories:

1) Engine performance
2) Fuel handling: anti foaming, anti-freezing
3) Fuel stability
4) Contaminant control

EVERY ENTRANT GETS £5.00 OFF THEIR NEXT PURCHASE!

All competition entries must be received by 20th April and should be on postcards only. Only one entry per reader per prize will be allowed to ensure that all readers have the same chance of winning. All competitions in *Diesel Car* are run subject to the following conditions: All prizes are offered via participating companies. The judge's decision is final and no cash alternatives to prizes will be offered. No correspondence regarding competitions will be entered into. All entries to competitions may be passed onto participating companies for inclusion in databases and entry into a competition notifies acceptance of the above rules and conditions.
